DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, “...*the control points that are selected...*” or a *illustration of the control points being selected* must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: “...*the first and second input stages further including control points that are selected...*”.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for *first and second input stages*, does not reasonably provide enablement for *the first and second input stages further including control points that are selected...*. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Regarding claim 1, recites, “...the first and second input stages further including control points that are selected...”. The function of first and second input stages has not been disclosed in the specification as being claimed.

Dependent claims 2-10 are dependent upon claim 1, and thus rejected accordingly.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 11-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 11 and 16, respectively, the claim language recites, "the other of the audio signal" (claim 11, line 5). It unclear to the examiner as the whether or not one or more audio signals are being claimed. Further it also unclear to the examiner as to whether or not the processed audio signal of line 7, and a processed signal in line 8 are one and the same (claim 11), and the same for lines 7, and 9 –10 for claim 16..

Dependent claims 12-15 depend from claim 11, and thus rejected accordingly.

Prior Art

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U. S. Patent No., 4405832, discloses a circuit for distorting an audio signal.

Response to Arguments

7. Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

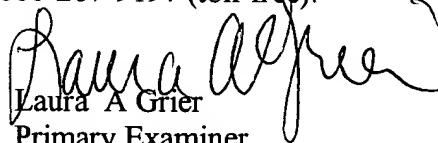

The new grounds of rejection are provided in respect to the 112 1st and 2nd paragraph rejections. The applicant essential argues the prior art of record fails to disclose the invention as claimed. The Previous are rejection has been withdrawn.
